To obtain pure manganese from a bath containing ad-  
ditions of SO<sub>2</sub> electrolysis should be carried out at a  
pH from 4 to 6. This produces a decrease in dendrite  
formation on the cathode, an increase in current yield,  
and gives a minimum amount of sulfur in the deposit  
which is an important factor for the metallurgical  
industry, the main consumer of manganese. To obtain
